

Open-Book by Design

Students may use AI and other resources, but questions are designed to reward application and critical judgement.

How It Works

- Students may use notes, textbooks, websites, and generative AI tools during the assessment.
- Questions focus on unfamiliar cases, interpretation, evaluation, and decision-making.
- Students may be asked to critique an AI-generated answer or choose between several plausible explanations.
- MCQs can be combined with short justifications, confidence ratings, or follow-up questions.

Shared Assumptions

- The assessment strategy must be used with more than 500 students.
- The MCQ assessment contributes 40% of the final mark for a 15-credit module.
- Assume that any proposed approach is technically possible. Focus on whether it is educationally desirable and defensible in practice.

Round 1: Develop Your Pitch

You have five minutes to prepare a one-minute pitch explaining why this approach should be adopted.

Pitch notes

Evaluate: Open-Book by Design

Score each criterion from 1 to 5. Scale definitions: 1 = very weak, 2 = weak, 3 = mixed, 4 = strong, 5 = very strong. Total possible score: 25.

Criterion	Key question	1	2	3	4	5
Learning value	Does it encourage meaningful learning?					
Validity	Does the mark provide credible evidence of understanding?					
Fairness	Is it equitable and inclusive?					
AI resilience	Does it remain credible when students can use AI?					
Practicality	Is it manageable for more than 500 students?					

Total score: _____ / 25

Strongest feature

Biggest weakness

Round 2: Anti-Pitch Notes

Sketch out why this approach should not be adopted without modification.

Anti-pitch notes

Round 3: Rebuttal Notes

Sketch out your response to the anti-pitch and defend the scenario.

Rebuttal notes
