

Detect and Deter

Students complete an online MCQ assessment, with safeguards used to discourage inappropriate use of AI.

How It Works

- Students complete a timed online assessment with randomised questions and answer options.
- Strict time limits and clear academic-integrity guidance act as deterrents.
- Activity logs are reviewed for unusual patterns, such as very rapid completion or repeated navigation away from the page.
- Suspicious cases may trigger a follow-up discussion, an additional task, or an academic-integrity investigation.

Shared Assumptions

- The assessment strategy must be used with more than 500 students.
- The MCQ assessment contributes 40% of the final mark for a 15-credit module.
- Assume that any proposed approach is technically possible. Focus on whether it is educationally desirable and defensible in practice.

Round 1: Develop Your Pitch

You have five minutes to prepare a one-minute pitch explaining why this approach should be adopted.

Pitch notes

Evaluate: Detect and Deter

Score each criterion from 1 to 5. Scale definitions: 1 = very weak, 2 = weak, 3 = mixed, 4 = strong, 5 = very strong. Total possible score: 25.

Criterion	Key question	1	2	3	4	5
Learning value	Does it encourage meaningful learning?					
Validity	Does the mark provide credible evidence of understanding?					
Fairness	Is it equitable and inclusive?					
AI resilience	Does it remain credible when students can use AI?					
Practicality	Is it manageable for more than 500 students?					

Total score: _____ / 25

Strongest feature

Biggest weakness

Round 2: Anti-Pitch Notes

Sketch out why this approach should not be adopted without modification.

Anti-pitch notes

Round 3: Rebuttal Notes

Sketch out your response to the anti-pitch and defend the scenario.
